

industrial grade **networking & control** solutions

We conceptualize, design, build, test and sustain industrial grade networking and control products.

For over a decade we have been blending technology expertise, domain understanding and process capabilities to deliver engineering services to global names in the industrial world.

Industrial Wireless

Are you prepared for the industrial wireless revolution?

- Identify the right wireless technology for your applications
- Wireless enable your existing products
- Develop wireless networking products to the latest standards

Product Sustenance

How much of your R&D budget is spent sustaining legacy products?

- Stay focused on new products
- Enhance product shelf-life
- Improve margins on legacy products

New Product Development

Is your innovation engine driving profitable new products?

- Bring your product ideas to market
- Do more with your engineering budget
- Complement your engineering capabilities

Testing & Certification

Are you meeting your product testing goals?

- Test your products using the best practices in methodologies and processes
- Augment your testing capabilities
- Pre-test your products to ensure compliance and certification readiness

Emerging Markets

Are your products designed for the emerging markets?

- Localize your products for emerging markets
- Re-engineer your products to hit the right price point for emerging markets

SoftDEL delivers on engineering challenges with structured processes that involves discovery of a solution, defining the optimum execution path and delivering quality. We use internally customized monitoring and management tools to ensure quality and on-schedule projects for maximum benefit to the customer's innovation pipeline.

Prodigy

Productivity through Globalization

We work hard on helping our customers streamline their innovation and product development processes. Our Prodigy process has been refined over several years of deep interaction and value creation for our global customers, ultimately boosting productivity of their innovation engine.

These streamlined methods help SoftDEL execute product development, product sustenance and maintenance efficiently.

Assert

Process oriented certification

Certification and interoperability testing are key to the success of any industry standard communication protocol. SoftDEL has developed a robust but flexible process (Assert) to implement and execute the certification process for industry standards.

SoftDEL has setup the BACnet Testing Laboratories (BTL) for BACnet International USA based on its Assert process. The lab is also ISO17025 accredited.

Learn more about the BACnet device certification process.

Navigator

Quality in Execution

To implement Prodigy and CMMI throughout the services delivery process, SoftDEL uses Navigator, a project, process and quality management toolset. Navigator helps effectively plan, track and deliver both large and small projects to its global customers. This tool offers smart insight into a projects progress at any time and allows us to adhere to CMMI level procedures.

We operate every project with CMMI level 3 compliant procedures.

Infrastructure

SoftDEL's new high-tech facility in Magarpatta City, Pune is a master-planned 20,000 sq. ft. technology center with state-of-the-art infrastructure designed to accommodate over 200 world-class engineers.

The Technology Center that can accommodate over 200 engineers, features high-tech infrastructure

- Training facility
- Library
- Testing & hardware Labs
- Conference & meeting rooms
- Cafeteria

Global companies like EDS, Accenture, John Deere, Amdocs etc have their facilities within the Magarpatta City campus. SoftDEL is housed on the 3rd Floor of Pentagon Tower (P4) in this highly acclaimed township.

About Softdel

For over a decade, we have been leveraging our expertise in electronics, software and mechanical engineering to help global automation companies design, develop, test and sustain their product lines.

Vision

Networking and control will drive the next phase of innovation in an increasingly connected industrial world. We strive to provide cutting-edge industrial grade technologies and services to enable this revolution.

USA
